Supportive from  $t = 0$

# Contents

	Preface.....	ix
1	Introduction.....	1
	Perception.....	1
	The Meaning and Import of Unification of the Laws of Science.....	4
	Laws of Conservation and Laws of Mechanism.....	6
	Notes.....	6
	References.....	6
2	Perception as a Choice among Alternatives.....	8
	Perception: Undefined.....	8
	Information: Defined.....	9
	Information and Perception.....	10
	The Gist of the Entropic Theory of Perception.....	12
	Notes.....	13
	References.....	14
3	The Empirical Laws of Sensation and Perception.....	15
	The Law of Sensation.....	15
	Adaptation.....	19
	The Weber Fraction.....	23
	The Analogs.....	26
	Threshold Effects: The Laws of Blondel and Rey, of Hughes, and of Bloch and Charpentier.....	27
	Simple Reaction Time.....	28
	The Poulton-Teghtsoonian Law.....	30
	A Very Approximate Law of Olfactory Thresholds.....	31
	The Ferry-Porter Law and Talbot's Law.....	31
	Notes.....	31
	References.....	32

4	Information of Events with Discrete Outcomes: Methods of Communication Theory and Psychology .....	34
	Picking up the Thread .....	34
	A Channel of Communication.....	37
	The Noisy Channel I .....	38
	The Noisy Channel II.....	42
	Summary .....	46
	The Bottom Line .....	47
	Appendix: The Equivalence of Equations (4.21) and (4.33).....	47
	Notes.....	49
	References .....	49
5	Information of Events with Discrete Outcomes: Applications in Communications Science and in Psychology .....	50
	Communications Science .....	50
	Psychology: Categorical Judgments.....	51
	The Conceptual Basis for the Application of Information Theory as Developed in the 1950s .....	55
	References .....	57
6	Information of Events with Discrete Outcomes: Methods of Physics .....	58
	Orientation.....	58
	The First Law of Thermodynamics.....	58
	The Second Law of Thermodynamics .....	59
	The Carnot Cycle/Engine.....	59
	The Clausius Inequality.....	60
	Physical Entropy .....	61
	The Principle of Increase of Physical Entropy.....	62
	The Laboratory Measure of Physical Entropy Change .....	63
	Summary of Section on Classical Thermodynamics.....	64
	Statistical Mechanics: m-Space and Phase Points.....	64
	Macrostates and Microstates .....	65
	The Basic Assumption of Statistical Mechanics .....	66
	Physical Entropy and Disorder.....	69
	Applications of Entropy Change in Chemistry .....	70
	The Purpose of This Chapter.....	70
	Notes.....	71
	References .....	71
7	The Information of Events with Continuous Outcomes .....	72
	Probability Density.....	72
	The Differential Entropy of a Probability Density Function.....	73
	The Absolute Entropy .....	76
	Convolution.....	78
	Applications in Perceptual Studies.....	79
	Notes.....	80
	References .....	80

8	The Entropy of the Normal Distribution.....	81
	Introduction .....	81
	Convolution of Two Gaussians .....	82
	Information.....	83
	More on the Interpretation of the Information from Continuous Sources .....	83
	The Central Limit Theorem.....	84
	Analog Channels .....	85
	Appendix: Convolution of Two Gaussian Functions .....	86
	References .....	87
9	Modeling the $H$ -Function.....	88
	The Sensory Receptor as a Quantum Detector.....	89
	Sampling the Stimulus Population .....	90
	The Reference Signal .....	90
	Relationship between Variance and Mean.....	91
	The Entropy Function.....	92
	Population vs. Sample Variance.....	93
	Maximum $H$ as Potential Information.....	93
	The Sensory Neuron as Metachannel.....	93
	$F$ at the Threshold .....	94
	Information-Free Approach.....	95
	Conservation Laws and Unification.....	95
	Appendix: The Parable of the Supermarket.....	96
	Notes.....	98
	References .....	99
10	Derivation of the Law of Sensation .....	100
	The Dual Forms of the Empirical Law of Sensation: Fechner's and Stevens' Laws....	100
	Derivation of the Law of Sensation from the Entropy Equation.....	100
	Objections to a Common Law of Sensation.....	102
	Objections to the Entropic Formulation of the Law of Sensation.....	102
	Other Endeavors to Unify the Two Forms of the Law of Sensation.....	103
	Numerical Evaluation of the Constants $k$ , $y$ , and $n$ .....	104
	Measurements of Total Numbers of Action Potentials .....	108
	The Perceptual Variable .....	110
	Unification.....	111
	History .....	111
	Notes.....	111
	References .....	112
11	Sensory Adaptation.....	113
	The Entropic Interpretation of Adaptation.....	113
	Information, Receptors, and Categorical Judgments .....	115
	Experimental Tests of the Entropic Theory of Adaptation .....	117
	Experimental Tests of the Entropic Theory: Combined Stimulus Intensity and Adaptation .....	121
	Magical Numbers from the Law of Sensation .....	124
	Numero, Numero, Wherefore Art Thou Numero?.....	125

Audition: The Technique of Simultaneous Dichotic Loudness Balance (SDLB) .....	126
Concluding Remarks .....	127
Notes.....	128
References .....	129
<b>12 Differential Thresholds, Weber Fractions, and JND's .....</b>	<b>130</b>
The Analogs .....	130
The Weber Fraction.....	131
Derivation of the Poulton-Teghtsoonian Law .....	135
Information per Stimulus from Weber Fractions .....	137
Invariants in Measuring Differential Thresholds .....	137
On the Physical Meaning of $\Delta I$ .....	138
The Terminal, Rising Portion of the Weber Fraction Curve.....	138
$\Delta H$ as Threshold .....	139
Working toward a Common Set of Parameters.....	139
Prediction: Effects of Adaptation on Equal Loudness Contours .....	140
Summary .....	141
Notes.....	141
References .....	142
<b>13 Simple Reaction Times and the Blondel-Rey Law.....</b>	<b>143</b>
Introduction .....	143
Derivation of an Equation Giving Simple Reaction Time as a Function of Stimulus Intensity.....	144
Derivation of One of the Empirical Equations of H. Piéron .....	147
The Constant $\Delta H$ for Simple Reaction Time .....	147
Evaluation of the Informational Equation for Simple Reaction Time .....	148
The Informational Basis of Reaction Times .....	151
Compiling a Common Set of Parameters for Taste of Sodium Chloride.....	152
The Laws of Blondel and Rey, of Hughes, and of Bloch and Charpentier .....	156
The Blondel-Rey Law and the Ferry-Porter Law.....	157
Brightness Enhancement .....	159
Olfactory Thresholds.....	159
Conclusions .....	160
Appendix: Changing the Units of the Parameter $\beta$ .....	160
Notes.....	161
References .....	162
<b>14 Odds and <math>n</math>'s, and the Magical Number <math>\text{Log}(2\pi)</math> Bits of Information ....</b>	<b>164</b>
Retrospective: The Genealogy of $F = kH$ .....	164
$F$ Just Above Threshold for Detection: Distinction between $F(\text{Psychophysical})$ and $F(\text{Neural})$ .....	164
Expanding the Horizons beyond "Intensity" and "Duration" .....	168
The Exponent $n$ .....	169
The Exponent $n$ at Various Auditory Frequencies .....	170
An Intensity-Frequency Formulation of the Entropy Equation for Audition.....	172
De-adaptation .....	173
The "Magical" Number 7: Whence and Why?.....	173
A Brief History of the "Complete" Law of Sensation.....	176

Notes.....	177
References .....	178
<b>15 Boltzmann and Berkeley.....</b>	<b>179</b>
Boltzmann: $F = kH$ and $S = -k_B H_B$ .....	179
George Berkeley: The Relativity of Perception .....	181
Appendix: The Near-equivalence of $H_B$ and $H_I$ .....	183
Notes.....	184
References .....	184
<b>16 Physiological Consequences of the Relativity of Perception .....</b>	<b>185</b>
Perception of the States of Matter: A Personal Reminiscence.....	185
Origin of the Entropy Theory.....	186
Generation of Signals by the Perceptual Unit: The Discrete Model.....	188
Generation of Signals by the Perceptual Unit: The Continuous Model.....	190
Notes.....	192
References .....	193
<b>17 Extrapolations and Speculations .....</b>	<b>194</b>
Reality .....	194
The Perceptual Unit.....	195
Illusions: The Necker Cube as Entropic Multivibrator .....	196
Cochlear Implants .....	197
The Relativity of Existence .....	197
The Evolution of Evolution.....	198
The Anthropic Principle.....	201
Quantum Theory and Perception.....	202
Summary .....	203
Notes.....	204
References .....	205
<b>Glossary of Symbols.....</b>	<b>206</b>
